

RUBBER PROTECTION COVER...

The Rubber Protector provides additional protection for the IRI 1000 range and IRI 4000 range of thermal imaging products.

Made from tough but flexible silicone rubber the protection cover is robust enough to take hard knocks while retaining its flexibility for easy fitting and removal.

The cover is designed to mould itself around the imager and with internal rubber bumps that are designed to lock into the camera. The cover fits in place while ensuring free access to all function buttons and the access hatch for the recharge point and SD memory card.

“ The cover is designed to mould itself around the imager ”

Depending on the application the cover comes with an additional rubber ring that fits over the lens providing additional lens protection while retaining the manual focussing operation.

The Rubber Protector is moulded from silicone rubber and has a hardness of 70 Shore 'A'. It is available in matt black and weighs 160g.

Part No.	Description	Application
IWI 4307	Rubber jacket and 20° lens cover	IRI 4010
IWI 4309	Rubber jacket and 10° lens cover	IRI 4040
IWI 4310	Rubber jacket only	IRI 1010 IRI 1020 IRI 4030 IRI 4035
